NOTICE to Residents of Pleasant Street

The East Windsor Water Pollution Control Facility has been addressing a number of concerns with the sewer line on Pleasant Street. This is a very old line comprised of clay tile pipe. This pipe has 3 ft lengths which allows roots to intrude the pipe at each joint. We have televised the line several times in an attempt to identify the problems. The line is over 1850 ft long and we made a decision to have the existing clay tile sewer line relined by a method known as Cured in place pipe (CIPP).

The WPCA has engaged the services of Green Mountain Pipeline to rehabilitate the sewer main on Pleasant St using a method called Cured-in-Place Pipelining. This system will provide a new, joint-less sewer pipe for your street that minimizes root and water infiltration problems, improves flow, and provides for a more structural sound pipe without the need for excavation.

To accomplish this, there will be a temporary disruption of sewer service to your residence or business beginning Monday July 31, 2023. We expect this project will be done by Thursday August 3, 2023.

During this period your property's sewer service connection will be completely sealed off from the town's mainline in the street. Please limit the use of water going down your drains to an absolute minimum and do not use washing machines or dishwashers.

If you must shower, leave the water in the tub until your service has been restored. Any sump pumps connected to the sewer system must be disconnected and/or discharged elsewhere to avoid possible damage to our liner, or backups in your basement. Failure to follow these instructions may cause your discharge to backup into your property.

On residential streets, the set-up of equipment may cause some adjustments in parking and neighborhood driving patterns. However, every effort will be made to make this inconvenience as slight as possible. During certain phases of the operation, you may detect an odor. Odors are most likely to occur in houses or buildings with dry or non-existent traps. In most cases, any odors can be minimized by pouring several gallons of water down your sinks, showers, toilets, etc.; and by opening your windows.

If you have any questions or concerns during the course of our installation period; please do not hesitate to ask for the Site Supervisor or Crew Foreman at the job site. When your service has been restored, you will be promptly notified with another notice.

If you have any questions or concerns regarding this project please contact the East Windsor Water Pollution Control Facility at 860-292-8264. Thank you for your cooperation as we improve the sanitary sewer infrastructure.

E.Arthur Enderle III
